

ASPHALT RELEASE SLIDE OUT

Liberador De Asfalto

DESCRIPTION:

Slide Out is a product specifically developed for the asphalt industry, to work on Polymer modified oils such as PG-64-28, PG-64-34, PG-70-28, SMA, OGSC & BWC. It is a blend of natural, completely biodegradable products that, when combined in a specially designed formula, works extraordinarily well to prevent asphalt, or any tar product from sticking to metal. This product contains no VOC's (volatile organic compounds). Slide Out makes the need to manually clean the bed of a truck a thing of the past, thus reducing man-hours and safety issues.

CAUTION:

As with all oils, product may soften rubber over time. Do not spray directly onto tires or rubber tire rollers. Do not take internally. If accidental ingestion does occur, drink a large amount of water and consult a physician. If splashed into eyes, flush with large volumes of clear water. Triple rinse empty container with water before disposing of in an authorized landfill site.

DIRECTIONS:

Slide Out works optimally when applied with Brody Chemical's "Timed Application System". Push the button for twenty seconds of fine-mist application that will deliver approximately 1-pint of product to a 20-ton, 18-yard belly dump truck. A delay between 3 seconds and 12 minutes can be programmed into the system. Standard delay is 5-seconds. This film technology will adhere to the metal. Used straight, Slide Out will release 2 to 4 loads of asphalt, without re-applying.
